Description. In port cities around the world, waterfront development projects have been hailed both as spaces of promise and as crucial territorial wedges in twenty-first century competitive growth strategies. Frequently, these mega-projects have been intended to transform derelict docklands into communities of hope with sustainable urban economies—economies intended to both compete in and support globally-networked hierarchies of cities.

economic restructuring, technological change in shipping and cargo handling facilities, and competition among cities in a global hierarchy. During the late 1960s, as economic production systems became organized at a global scale and containerization and other major technological innovations began to take hold, ports moved seawards away from the city centre (Hoyle 1989).

Transforming Urban Waterfronts Fixity and Flow Edited by Gene Desfor, Jennefer Laidley, Quentin Stevens and Dirk Schubert In his 1996 book The Rise of the Network Society, Castells discusses the ways that the development of information processing technologies has revolutionized our economies and in particular our life in cities.

### **From: Transforming Urban Waterfronts**

A fixity and flow perspective focuses on analysing the complex array of dynamic and inseparable social and biophysical processes that come together to transform urban waterfronts.

### **Changing Urban Waterfronts: A Fixity And Flow Perspective**

The 'fixity and flow of urban waterfronts' is an exciting and innovative concept that captures the many tensions that give rise to change on urban waterfronts. It also provides a critical lens through which to analyze the dynamism and interconnectedness of the tangle of relations and organizations associated with waterfront development.
